How Much Gold Can You Refine From a Bunch of Old Computer ...

Here's a process of recycle gold from motherboards. Gold is found in numerous places on a motherboard: IDE connectors, PCI Express slot, PCI, AGP, ISA, and other ports, jumper pins, the processor socket, and DIMM (SIMM on older motherboards) slots. All of these connectors are often covered with a fine layer of gold a few microns thick, deposited by flashing or plating.

How to Refine Gold from PC Motherboards

Access Free Gold Refining From Computer Motherboards

Refine the gold. Drop the gold into the Aqua Regina, then fill the beaker the rest of the way with sodium meta bisulphite. This solution will eat away any copper or other metals that may have been smelted into the gold when it was manufactured. The remaining gold substance will collect in the bottom of the beaker and will be pure 24k gold.

How to Refine Gold From Electronic Scrap | Sapling
