Check the valve clearances by inserting a flat feeler gauge between the end of the valve stem and the rocker arm. The clearance can be checked for No. 1 and No. 2 intake valves and No. 1 and No. 3 exhaust valves. If the valve clearance is incorrect, loosen the adjusting screw lock-nut and adjust the clearance by turning the adjusting screw with the feeler blade inserted.

They transfer the downward motion of the cams on the camshaft to depress the valves. There is a thin clearance of about 8 thousandths of an inch with the engine cold. As the engine heats the clearance reduces. Over tightening causes the valve edges to burn, too much clearance causes tapping. Manual tappets get quieter usually as the engine heats.
