The number e , also known as Euler's number, is a mathematical constant approximately equal to 2.71828, and can be characterized in many ways. It is the base of the natural logarithm. It is the limit of $(1 + 1/n)^n$ as n approaches infinity, an expression that arises in the study of compound interest. It can also be calculated as the sum of the infinite series

e (mathematical constant) - Wikipedia

Abstract. Nipa palm (*Nypa fruticans*,) is a useful, versatile, and fairly common component of mangrove forests of Asia and Oceania. Because of its usefulness, it has been introduced into West Africa. In addition to a host of local subsistence uses ranging from medicines to hats and raincoats, some important commercial uses have led to management efforts and are initiating a new interest in its potential.

Use and management of Nipa palm (*Nypa fruticans* ...

The international trade in rattan dates from the mid-19th century (Corner, 1996) and this trade is now currently worth some US\$6.5 billion a year (ITTO, 1997). A conservative estimate of the domestic markets of Southeast Asia by Manokaran (1990) suggested a net worth of US\$2.5 billion. ... Corner, E.J.H., 1966. The Natural History of Palms ...
